

ECOMMERCE DATA CLEANING & ANALYSIS

OVERVIEW

1. Project background and description

Analyze ecommerce sales dataset (Kaggle) to identify top-performing products and categories, customer spending behavior, payment preferences, and delivery performance so the business can improve revenue and customer experience.

2. Dataset Summary

Rows: 109

Columns: 11, id, customer name, order id, order date, product, category, quantity, price, payment method, status, total

3. Exploratory Data Analysis/Cleaning using Python

- Imported dataset using pandas
- Data exploration
- Missing data
- Column standardization
- Correct types

4. Data Analysis using SQL

- Which product and category brings in the highest total revenue?

	product	category	total_revenue
▶	blender	home	3948.2

- Which customers spend the most?

	customer_name	total
▶	Customer_117	20000
	Customer_194	4722.7
	Customer_149	4481.9
	Customer_144	4245.35
	Customer_143	4133.85

- What payment methods are used most often?

	payment_method	times_used
▶	Cash on Delivery	30
	PayPal	20
	Credit Card	21
	Bank Transfer	19

- Which products have the highest quantities sold?

	product	quantity
▶	shoes	5
	blender	5
	science	5
	biography	5
	football	5

- What is the average (total) by category?

	category	avg_total
▶	home	1445.76
	sports	1409.73
	books	1821.51
	clothing	2331.74
	electronics	1911.43
